Access Manager 4.1 Service Pack 1 Hotfix 1 Release Notes

August 2015

Access Manager 4.1 Service Pack 1 Hotfix 1 (4.1.1 HF1) supersedes Access Manager 4.1 Service Pack 1 (4.1.1).

For the list of software fixes and enhancements in the previous release, see Access Manager 4.1 SP1 Release Notes

- Section 1, “What’s New?,” on page 1
- Section 2, “Upgrading to 4.1.1 HF1,” on page 2
- Section 3, “Verifying Version Numbers After Upgrading to 4.1.1 HF1,” on page 2
- Section 4, “Contact Information,” on page 2
- Section 5, “Legal Notice,” on page 3

1 What’s New?

This release includes the following platform updates and fixed issues:

- Section 1.1, “Updates for Dependent Components,” on page 1
- Section 1.2, “Fixed Issues,” on page 2

1.1 Updates for Dependent Components

In this release, the Java version has been updated to 1.8.0_51. This release also includes fixes for the following:

- CVE-2015-4749
- CVE-2015-2659
- CVE-2015-4748

For more information on other Oracle critical patch updates, see http://www.oracle.com/technetwork/topics/security/cpujul2015-2367936.html.

1.1.1 Upgrading the Java Version

On Linux:

There are no manual steps required to update the version of Java. After upgrading, the Java version is 1.8.0_51.

On Windows:

To upgrade the Java version, perform the following steps:

1. Traverse to the `C:/Program Files (x86)/Novell/update/HF1` folder.
2. Open the `jre_update_readme.txt` file and follow the instructions to manually update Java.

1.2 Fixed Issues

The following issue is fixed in the Administration Console component:

1.2.1 Customized Files Are Lost After the Device Restarts

Issue: In a clustered environment, when one node restarts, the customized files listed under **Access Manager > Code Promotion > Settings** are replaced with the default files. This results in loss of customizations. This occurs when only few nodes have customizations while the others use the default files. [`Bug 935061`]

Fix: This issue is resolved now and the customizations are retained.

2 Upgrading to 4.1.1 HF1

IMPORTANT: Ensure that you are currently on Access Manager 4.1.1 before upgrading to Access Manager 4.1.1 HF1.

To upgrade to Access Manager 4.1.1 HF1, perform the following steps:

1. Go to NetIQ Downloads Page.
2. Under **Patches**, click **Search Patches**.
3. Specify `AM_4111.zip` in the search box and download the file.
4. Save the hotfix file to the server running Access Manager. If you have multiple servers in your set up, ensure that you copy this .zip file to all the servers.
5. Extract the patch file by using the unzip `<patch name>`.zip command, where <patch filename> is the name of the patch file, for example, `AM_4111.zip`. For more information about the upgrade process, see Upgrading Access Manager 4.1.1 HF* Using the Patch Process for Linux or Upgrading Access Manager 4.1.1 HF* Using the Patch Process for Windows in the NetIQ Access Manager 4.1 Migration and Upgrade Guide.
6. Run the `sh installPatch.sh` command. This command installs the patch and the bundled binaries.

3 Verifying Version Numbers After Upgrading to 4.1.1 HF1

After upgrading to Access Manager 4.1.1 HF1, verify that the version number of the component is indicated as **4.1.1.1-9**. To verify the version number, perform the following steps:

1. In the Administration Console, click **Access Manager** > **Auditing** > **Troubleshooting** > **Version.**
2. Verify that the **Version** field lists **4.1.1.1-9**.

4 Contact Information

Our goal is to provide documentation that meets your needs. If you have suggestions for improvements, please email Documentation-Feedback@netiq.com. We value your input and look forward to hearing from you.

For detailed contact information, see the Support Contact Information Web site.

For general corporate and product information, see the NetIQ Corporate Web site.

You can post feedback in the Access Manager forum on Qmunity, our community Web site that also includes product notifications, blogs, and product user groups.

To download this product, go to Access Manager on the All Products Page.
