

#### BUSINESS CHALLENGE

Healthcare providers must offer efficient access to patient data, while maintaining privacy compliance and patient confidence.

#### SOLUTION

NetIQ® solutions allow your organization to access and secure protected health information with:

- Advanced authentication to sensitive data
- Management of roles and privileges
- Secure mobile and cloud access to patient information
- Monitoring of suspicious behavior
- Proactive threat identification
- Continuous compliance reporting

## NetIQ Healthcare Solutions: Efficient, Secure, Compliant

*Providing secure and efficient access to patient data for quality healthcare*

### Better IT Leads to Better Healthcare

As a healthcare provider, you rely on technology to deliver better patient outcomes. Emerging technologies help you to work more efficiently by enabling faster access to, and sharing of, sensitive patient information from anywhere, at any time and with any device. However, these technologies also complicate the task of protecting patient information, increasing your risks of data breach or non-compliance with privacy mandates and regulations that govern IT security in healthcare. Patients rely on you to keep their information secure and compliant with privacy and data protection regulations. NetIQ® provides identity, access, security and governance solutions that seamlessly support quality patient care.

#### *Efficient Access and Use of Information*

To offer excellent care, healthcare clinicians require access to patient health information and medical records anywhere, anytime, from any device. You need a single, simple, secure access method that does not get in the way of quality care. Healthcare clinicians often share devices, change roles and facilities, and move between facilities. This creates a complex environment of roles and privileges that you must manage seamlessly to ensure the efficiency of your clinical staff.

#### *Secure Management of Data*

Interoperability, meaningful use and data sharing are critical in healthcare to improve care and patient outcomes. This requires

you to share electronic health records (EHRs) and electronic medical records (EMRs) effectively and with the confidence that you are monitoring for suspicious behavior and guarding against patient data breaches. You need to identify, detect and mitigate the risk of threats, improper use and access, and data breaches in real time.

#### *Continuous Compliance to Regulations*

Patient privacy and compliance must be continuous and automated to be truly effective. As your infrastructure becomes more complex, you face new risks with heavy regulatory fines. Passing an annual audit is no longer good enough; without automation the task of compliance is unattainable. You need to take action with solutions that ensure information is secure and compliance is continuous and automated. Your solutions must enable you to attest to access and manage privileges rapidly in a complex environment.

### Healthcare Solutions from NetIQ Provide a Complete Solution

NetIQ solutions provide intelligent identity, access and monitoring capabilities to enable faster and simpler security and compliance. By ensuring your clinicians have the right access to the resources they need at the right time, NetIQ supports helping you improve patient care and outcomes. These capabilities provide the confidence your patients expect and allow you to deliver the information to meet regulatory compliance.

NetIQ helps you more easily manage IT complexity, reduce organizational risk and deliver quality patient care today and tomorrow, regardless of infrastructure—physical, virtual, cloud, mobile, outsourced and more.

NetIQ is your partner in the delivery of intelligent, identity-powered security, access and compliance management. Below are just a few of our solutions and some healthcare organizations that have succeeded by using them.

## Products

Identity Management	Access Management	Security Management
