

Are users the weakest security link?

You need secure, convenient access. You need Identity Governance & Administration solutions.

A Delicate Balance

between too little and too much access.

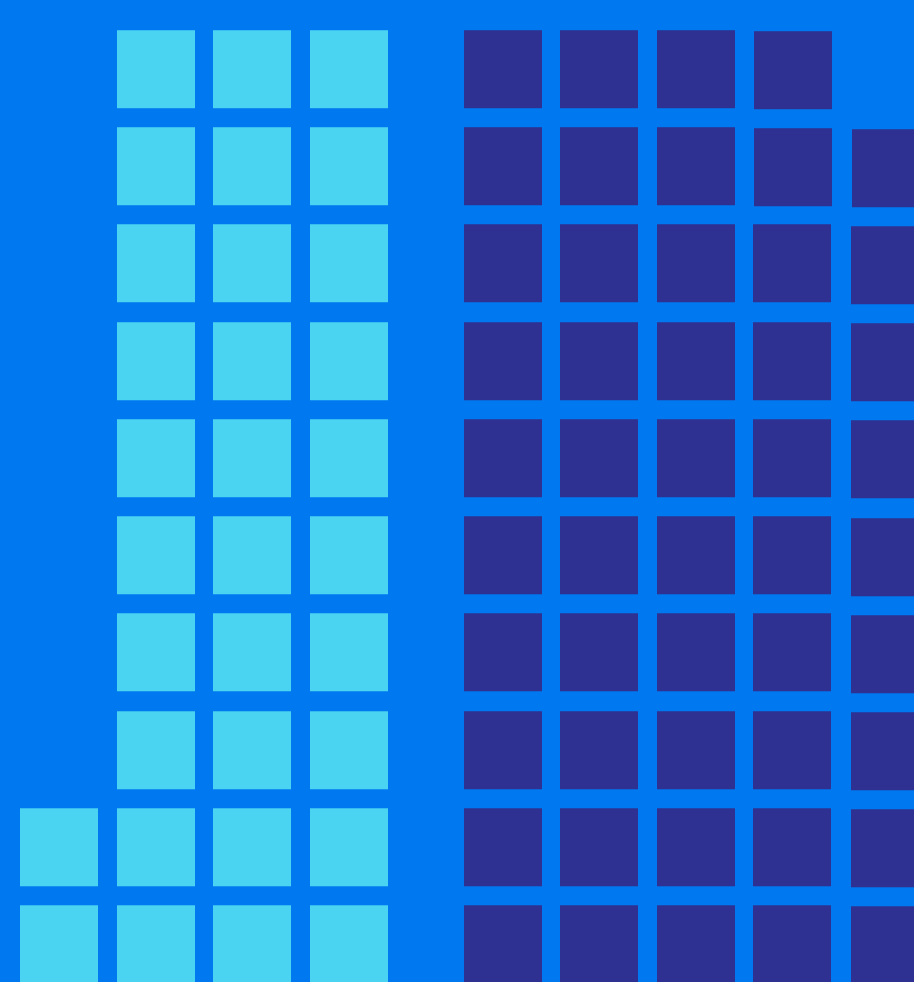

Provide appropriate governing access to critical systems and data – minus the rubber-stamp approval of user privileges.

Beware the Human Factor:

32% of respondents said insider “crimes” are more costly or damaging than incidents perpetrated by outsiders.

Yet, only ...

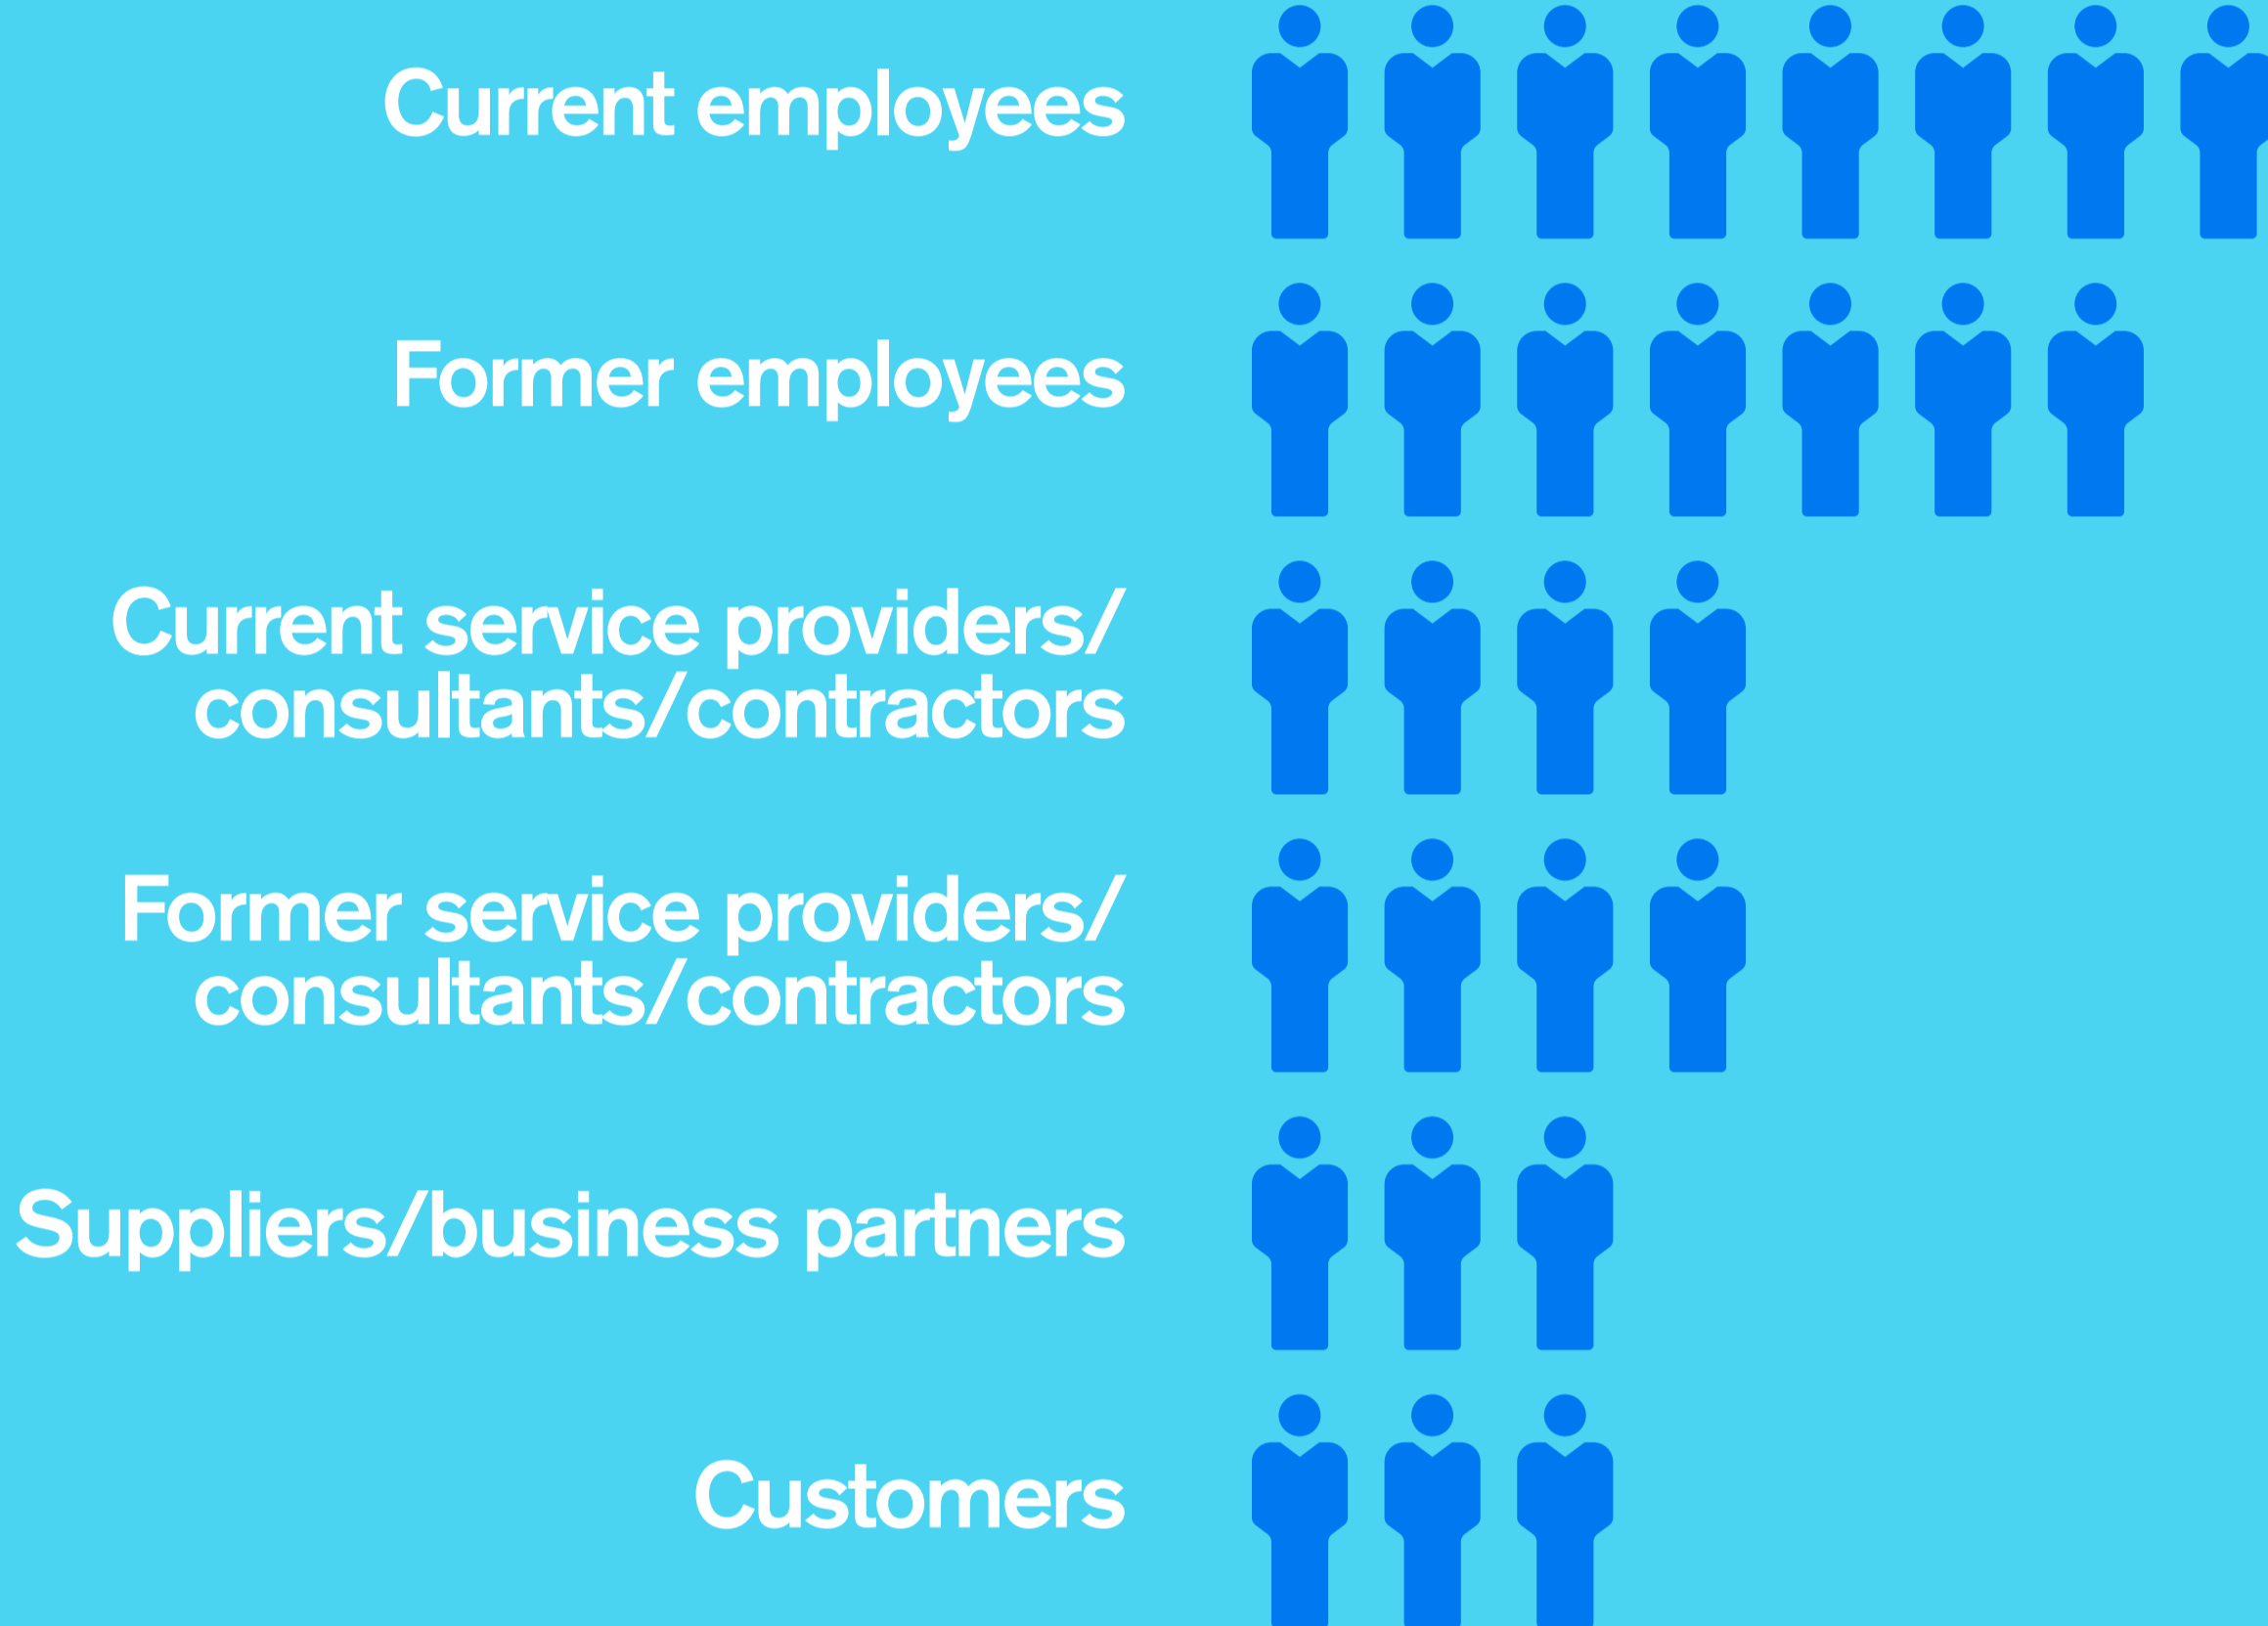

49% of respondents have a plan for responding to insider threats!

Underestimating the Threat of Insiders?

The top offenders of insiders crimes:

The Most Common Issues Creating Risk:

Over-reliance on IT. Assume IT is responsible for knowing an employee’s lifecycle.

Lack of context. Missing approval history and risk scoring makes it hard to focus on the high-risk areas.

Being reactive vs. proactive. Compliance efforts focus non-compliance and correcting after the fact.

Systems that are in silos. Limited visibility/control in silo IAM tools can lead to risk gaps.

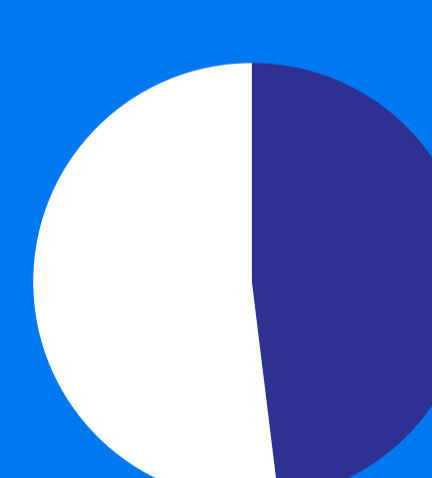

By the Numbers... It’s Kinda Scary.

38% senior managers do not understand the business risks inherent in their role.

63% non-managers do not understand the business risks inherent in their role.

Only 52% middle managers think about risk implications when they make important decisions.

A 1-2-3 Solution The risk-informed approach

Proactively manage security and identity risk in a centralized, structured way, a risk-based approach ensures that:

- 1. Any changes to access will conform to corporate policies**
- 2. Access already granted is appropriate**
- 3. Violations can be proactively and automatically detected and remediated**
