

# NetIQ Licensing Made Easy: Solutions for the Data Center

## How it works

Licensing NetIQ solutions for the data center is now easier and more convenient than it has ever been before. If you are transitioning older licenses to the new model or buying into NetIQ solutions for the first time, there are several important things you should know.

### *The IT Operations Management Base License*

Each enterprise (or purchasing entity inside larger organizations) is required to have a base license. This base license, while containing the rights to use certain connectors for NetIQ® AppManager™, doesn't include any functionality. It allows you to buy into any of the additional add-ons inside the data center solution set where rights to use products such as NetIQ® AppManager™, NetIQ® Aegis®, NetIQ® Operations Center, and the Unified Communications/Voice over IP products reside.

### *Add-ons*

Add-ons are how you purchase the functionality you need. Add-ons are licensed by one of three metrics for the data center solutions: per server, per device, or per enterprise.

**Per Enterprise:** As explained in the IT Operations Management Base License, the Per Enterprise metric applies to each enterprise (or buying entity inside of larger organizations). Functionality licensed per enterprise covers the entire enterprise, regardless of how many servers or devices may be used by that license.

**Per Server:** This means the number of servers (virtual or physical) under monitoring or management by NetIQ solutions. Since applications are housed on physical or virtual machines, applications themselves are no longer counted. However, any server that hosts an application under management— that entire server is considered under management.

**Per Device:** This means individual devices under management by NetIQ solutions. Examples of devices under monitoring/management include: VoIP phones, network switches, or gateways.

# Simple Licensing Model

Easy as 1-2-3

**Step 1:** Buy a Base License - own the solution

**1** IT Operations Management Base License (per enterprise)  
REQUIRED

**Step 2:** Add on Licenses for the function you need

**2** Add-on License (per enterprise)    Add-on Licenses (per server)    Add-on Licenses (per device)

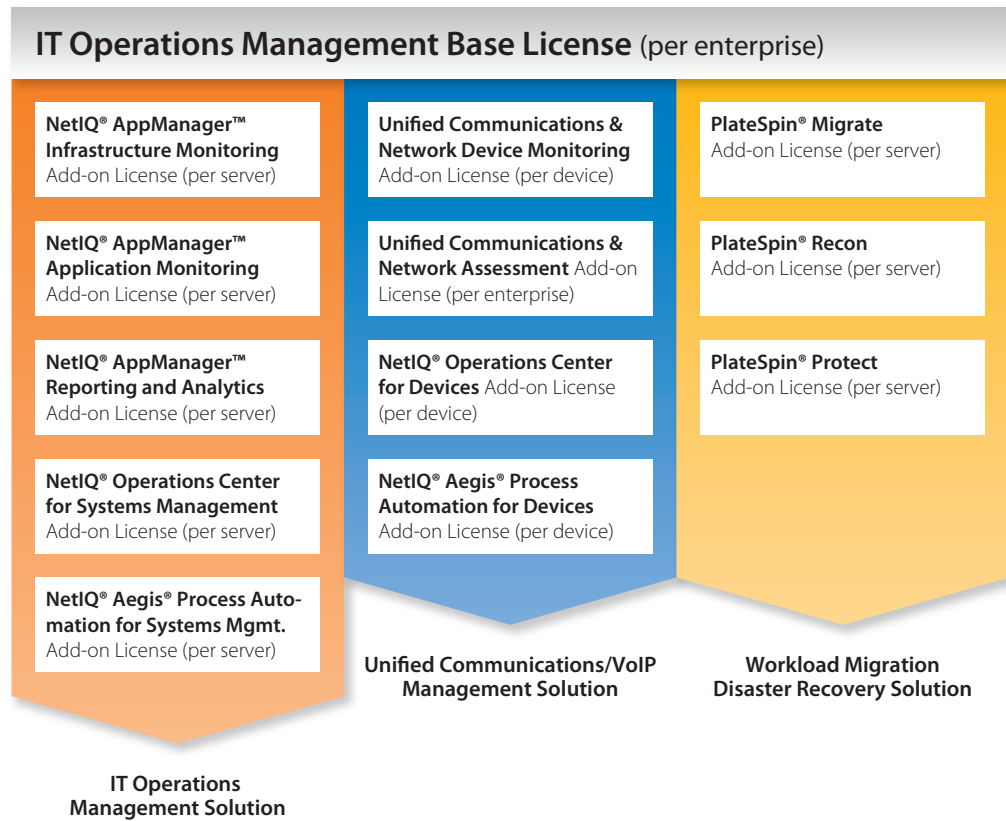

**Step 3:** Commitment and spend dictate discount

**3** Volume discounting / buying program

## What's for sale

### Add-ons by solution

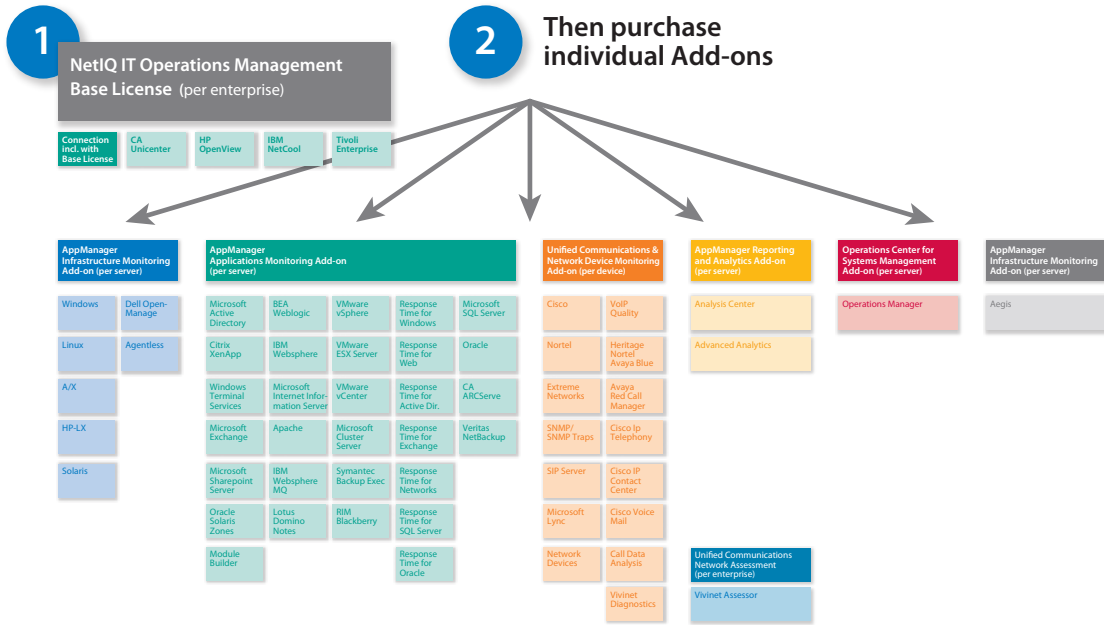

### What's included in the Add-ons?

For customers familiar with the older licensing model of NetIQ® AppManager™, you might be wondering what has happened to all the modules you're used to licensing. Individual NetIQ® AppManager™ modules are now located inside the Add-ons. The following graphic shows where many popular NetIQ® AppManager™ modules now reside. Additional and constantly updated information about the AppManager™ add-ons and what they contain can be located at [www.netiq.com/products/appmanager](http://www.netiq.com/products/appmanager).

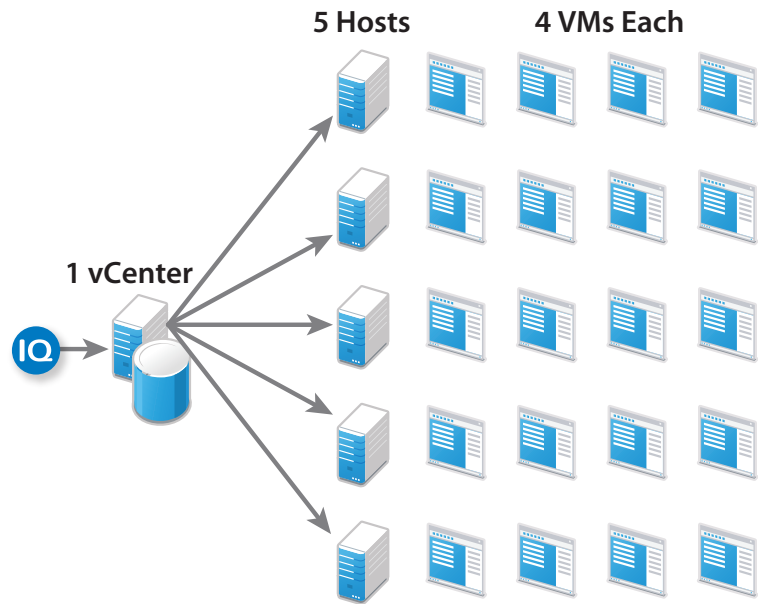

# NetIQ® AppManager™

What to buy to get the features you want

## Virtual machines

Once you understand how licensing works for virtualized technologies, licensing of virtual machines is fairly straightforward. Each physical machine hosting virtual machines must have an infrastructure monitoring license. Also, each virtual machine itself must also have an infrastructure monitoring license as well. Additionally, because virtualization itself is a software-based solution, the machine running the virtualization software will need an application monitoring license.

NetIQ® AppManager™  
Infrastructure Monitoring  
Add-on Licenses:  
5 Hosts + (5 x 4 VMs)  
+1 vCenter = 26

NetIQ® AppManager™  
Application Monitoring  
Add-on Licenses:  
1 (the vCenter proxy)

## Conclusion

The new licensing structure for NetIQ solutions for the data center makes owning and purchasing great products like NetIQ AppManager, NetIQ Operations Center, NetIQ Aegis, or our Unified Communications/Voice over IP monitoring solution easier and more convenient.
