## 5 Known Issue

The *Connectors Guide* for CloudAccess 2.3 specified that you must add four scopes when you create the Google service account. However, the service account also needs permission to use an additional “feeds” scope for the connector to configure the SSO settings in the Google domain. (Bug 960785)

When you set up the Google service account, in addition to the four scopes listed in the *Connectors Guide*, ensure that you include the following scope:

<https://apps-apis.google.com/a/feeds/domain/>
