

# Cloud Manager Mobile Client Rebranding Resources Quickstart

## Rebranding Cloud Manager to Match Your Own Branding.

If you want users of the iPhone and iPad Cloud Manager clients to see only your company branding of Cloud Manager, you can configure the Cloud Manager Application Server to enable it.

### Automatic Rebranding Setup

The Cloud Manager 2.1.4 installation configuration automatically configures the Cloud Manager Application Server to serve up rebranded image files from `/var/opt/netiq/cloudmanager/webres` and `/var/opt/netiq/cloudmanager/webres/mobile`.

### New Installation

Use the following steps to finish the setup of the rebranding feature after the initial Cloud Manager Application Server installation:

- 1 Copy the proprietary images you want to use to rebrand the mobile clients to `/var/opt/netiq/cloudmanager/webres/mobile`.
- 2 Restart Cloud Manager services (making sure to clear the cache) using the following command:

```
/etc/init.d/netiq-cloudmanager reload
```

- 3 Make sure you can access one of the rebranded files via a Web browser. For example, `login.png`:

```
https://<server>:8183/resources/mobile/login.png
```

**NOTE:** When you reference Cloud Manager files from a browser or from a mobile client, the files must be referenced explicitly. For example, if you have a file called `acme.jpg` in a `webres/mobile` folder (`/var/opt/netiq/cloudmanager/webres/mobile/acme.jpg`), you cannot browse to it directly. You must browse to it using an explicit URL, similar to one of the following:

```
http://<server_name>:<port>/resources
```

```
http://<server_name>:<port>/resources/mobile
```

- 4 (Optional) You can add the `/resources/mobile` directory to the path of all users, which allows public access to server side branding. This makes the following possible:

- ♦ no authentication
- ♦ no authorization
- ♦ no identity injection
- ♦ no form fill

4a Open `/etc/profile` for editing.

4b Insert the following 2 lines of code at the end of `/etc/profile`:

```
PATH=$PATH:/resources/mobile
export PATH
```

### Upgrade

If you are upgrading from Cloud Manager 2.1.3 to 2.1.4, the resource path for rebranding is the same path used in the earlier configuration.

### Rebranding the Image Resources

The NetIQ Cloud Manager documentation Web site has some [templates of image resources \(https://www.netiq.com/documentation/cloudmanager2/resources.zip\)](https://www.netiq.com/documentation/cloudmanager2/resources.zip) that you can download and use to customize your own rebranded images. You need to ensure the following:

- ♦ When a graphic designer creates the new brand images, the image size, format, and filename must remain the same. The image resources can help the designer maintain these criteria.

A subfolder in the .zip download includes screen examples that show the images in context.

- ♦ When you are finished customizing the images to match your own branding, upload them to the Cloud Manager Application Server.

The mobile device automatically detects the presence of the new images and rebrands itself on launch.

## Catalog of Sample Images

The table below shows the images that are included in the `resources.zip` file.

**IMPORTANT:** These images are not shown in their correct scale. Please download the samples.

Image	Description and Usage
 brand_home_logo.png	<ul style="list-style-type: none"> <li>144 x 44 pixels</li> <li>corporate logo layered on top of product at main menu screen</li> </ul>
