

NetIQ iManager 3.2 Service Pack 6 Release Notes

February 2022

NetIQ iManager 3.2 SP6 resolves previous issues. Many of these improvements were made in direct response to suggestions from our customers. We thank you for your time and valuable input. We hope you continue to help us ensure our products meet all your needs. You can post feedback in the iManager Community Support Forums, our community Web site that also includes product notifications, blogs, and product user groups.

For a full list of all issues resolved in NetIQ iManager 3.x, including all patches and service packs, refer to [TID 7016795, "History of Issues Resolved in NetIQ iManager 3.x"](#).

For more information about this release and for the latest release notes, see the [iManager Documentation](#) Web site. To download this product, see the [Software License and Download](#) portal.

What's New

iManager 3.2 SP6 provides the following enhancements and fixes in this release:

- ♦ ["Operating System Support" on page 1](#)
- ♦ ["Updates for Dependent Components" on page 2](#)
- ♦ ["Fixed Issues" on page 2](#)

Operating System Support

In addition to the platforms supported in previous releases of iManager, this release adds support for the following:

- ♦ Red Hat Enterprise Linux (RHEL) 8.5
- ♦ Windows Server 2022

Updates for Dependent Components

This release adds support for the following third-party components:

- ♦ Azul Zulu 1.8.0_312
- ♦ Apache Tomcat 9.0.55-1
- ♦ OpenSSL 1.0.2za
- ♦ Log4j 2.17.1

Fixed Issues

This release includes the following software fixes that resolve several previous issues:

Resolved Security Vulnerabilities

This version of iManager resolves CVE-2021-38134 - Microsoft Windows Update Client Elevation of Privilege Vulnerability. In addition, this release of iManager also resolves CVE-2022-38758 which addresses potential XSS and Stored XSS vulnerabilities in iManager versions prior to 3.2.6. Special thanks to Kajetan Rostojek for responsibly disclosing the information about CVE-2022-38758 to us.

Occasional Delay When Loading Pages on the iManager User Interface After Upgrading to iManager 3.2.5

Fix: With the latest version of Tomcat 9.0.55-1 bundled with iManager 3.2.6, there is no longer any delay while loading the pages on the iManager User Interface. (Defect 440043)

Connection Timeout Issue Seen When Modifying Directory Objects or Using Plug-Ins

Fix: With the latest version of Tomcat 9.0.55-1 bundled with iManager 3.2.6, there is no longer any delay while navigating the pages or browsing objects on the iManager User Interface. (Defect 448035)

System Requirements

For information about prerequisites, computer requirements, installation, upgrade or migration, see [Planning to Install iManager](#) in the *NetIQ iManager Installation Guide*.

NOTE: iManager uses the modified version of XULRunner on Windows. The source code for the modified XULRunner is available under the Mozilla Public License version 2.0. If you need further assistance with any issue, contact [Technical Support](#).

Installing or Upgrading

To upgrade to iManager 3.2 SP6, you need to be on iManager 2.7.7 P11 or higher.

For more information on upgrading to iManager 3.2 SP6, see the *NetIQ iManager Installation Guide*.

IMPORTANT: ♦ This version of iManager supports only eDirectory 9.2.6 or above when both are installed on the same machine. If you are upgrading iManager 2.7.7 P11 to 3.2 SP6, ensure that your eDirectory is also upgraded to 9.2.6 before upgrading iManager.

- ♦ When you install or upgrade to iManager 3.2 SP6, a new `imanager_logging.xml` file is created that includes the latest log4j 2.17.1 capabilities. During the upgrade process, the existing `imanager_logging.xml` file is replaced with a new one. As a result, the previous audit settings are lost. To allow auditing for iManager events, you must configure the audit settings again in the new `imanager_logging.xml` file after the upgrade. Make sure to take a backup of the existing file in a different location before performing the upgrade. For more information, see [Auditing iManager Events](#) in the *NetIQ iManager Administration Guide*.
-

Known Issues

NetIQ Corporation strives to ensure our products provide quality solutions for your enterprise software needs. There are no new issues other than the issues mentioned in the [NetIQ iManager 3.2 SP5 Release Notes](#). If you need further assistance with any issue, please contact [Technical Support](#).

iManager Workstation Does Not Work on SLED 12 SP3, SLED 15, OpenSUSE Leap 42.3, OpenSUSE 13.2, and Onward

Workaround: To work around this issue, launch iManager using the `iManager.sh` command and access the workstation through another browser via the URL: <http://localhost:8080/nps>. The port number can differ. You can find the port number in the `iManager.log` file located at `<extracted_directory>/imanager/bin/iManager.log` location.
