Installing and Removing EAP Server Package

Extensible Authentication Protocol Server (EAP Server) is an Internet Engineering Task Force (IETF) standard that provides an infrastructure for network access clients and authentication servers to host plug-in modules for current and future authentication methods.

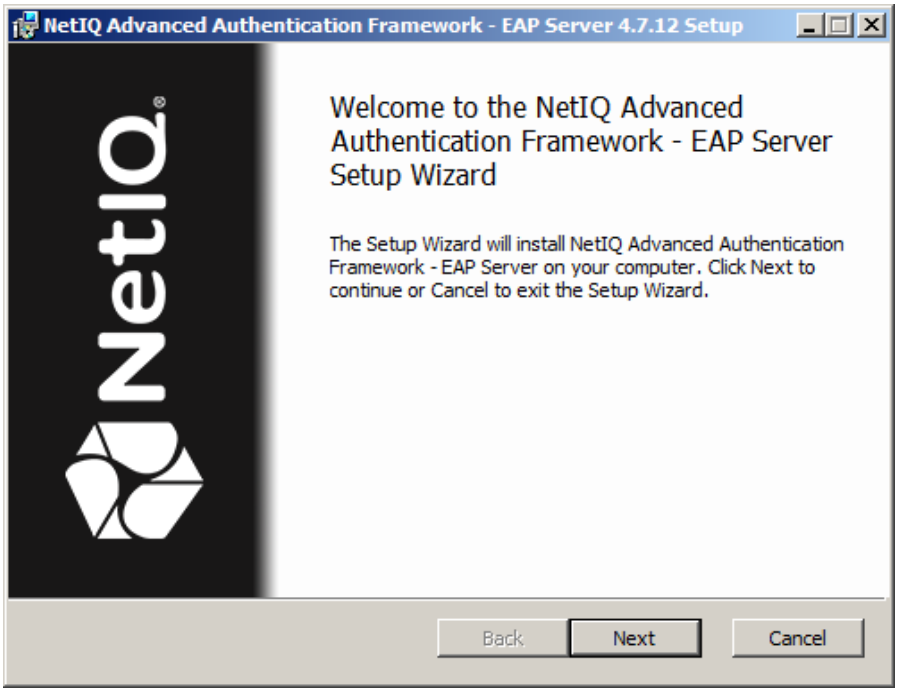
Installing EAP Server Package

The start of installation may be frozen for a time up to 1 minute in the case of offline mode. This delay occurs due to check of digital signature of component.

To install EAP Server Package via Setup Wizard:

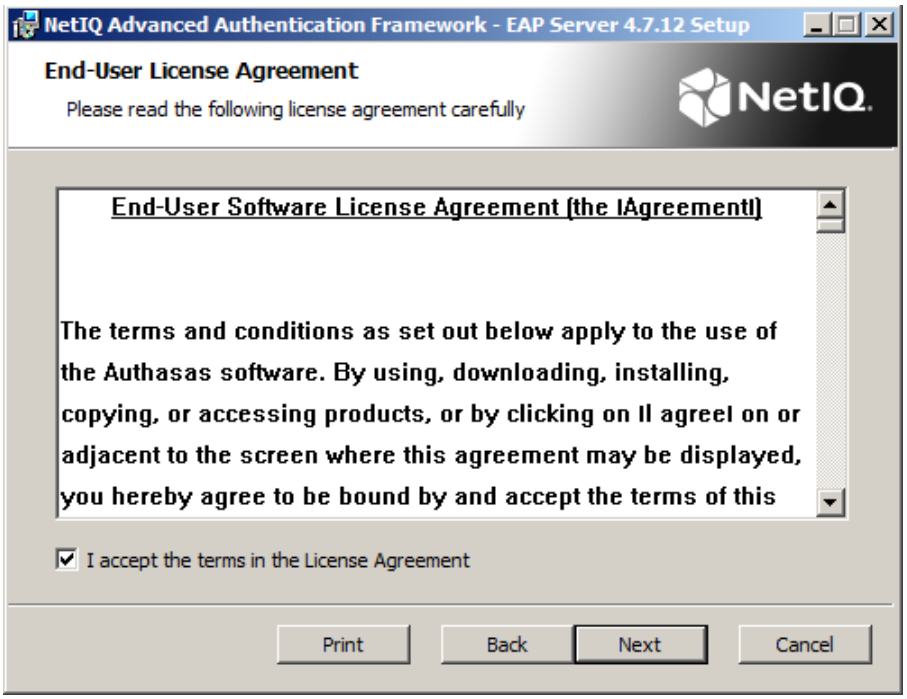
1. Run **Autorun.exe** from NetIQ Advanced Authentication Framework distribution kit. Tick **EAP Server** in the list of components and click **Continue**.

2. Click **Next** to continue.

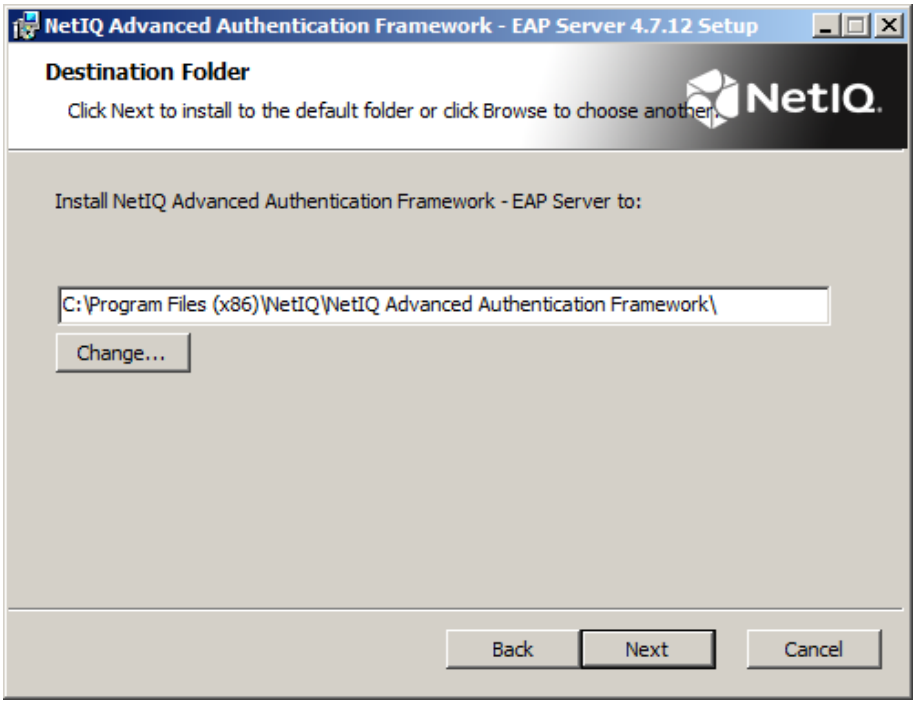


3. Read the **License agreement**. Click **I accept the terms in the license agreement** and then click **Install**.

© NetIQ



4. Check the destination folder and path.



5. Click **Install** and wait until the components are installed.

Removing EAP Server Package

To remove EAP Server Package, follow the steps:

1. In the **Start** menu, select **Control panel** and then double-click **Programs and Features**.
2. Select **NetIQ Advanced Authentication Framework – EAP Server Package** and click **Uninstall**.
3. Confirm the removal.
4. Wait a few seconds until the removal is completed.

Upgrading EAP Server Package

In order to upgrade EAP Server Package, start to install the new version. You will receive a notification about already existing previous version. Continue the standard installation procedure and your NetIQ Advanced Authentication Framework version will be automatically updated.

After the upgrade is complete, the installer may ask you to restart a computer.

You do not need to remove the previous NetIQ Advanced Authentication Framework version in order to upgrade EAP Server Package.

Troubleshooting

This chapter provides solutions for known issues. If you encounter any problems that are not mentioned here, please contact the support service**.**

Cannot Install EAP Server Package

Description:

Error appears when installing EAP Server Package on your computer.

Cause:

a) You are installing EAP Server Package on the network drive.

b) You have no space left on the disk.

c) You are installing EAP Server Package on the unsupported OS.

d) You are installing EAP Server Package on the OS with the wrong bitness.

Solution:

a) Change the installation path.

b) Free the amount of disk space needed for installation.

c) Check the System Requirements chapter.

d) Check your OS's bitness (x64/x86) and run the corresponding installer (x64/x86).
