

Abstract

TGSecure 1.6 adds major enhancements to the **Remote Exit Point** module and enhances the Privilege Escalation Management module interfaces.

Details

New Features

- Socket layer monitoring that enhances network security
- Rule creation intelligence engine that helps create more effective rules
- Privilege escalation tools that provide command prompting capabilities
- Integrated reporting engine that improves the report customization process and produces report outputs in HTML, CSV, and XML formats

Enhancements

- Remote exit point enhancements that improve coverage, including latest IBM i operating system enhancement (IBM i 7.3)
- Group enhancements that expand group types (user, network, object)
- Rule enhancements that allow for more granular rule definitions at the object level (native and IFS)
- Report engine enhancements that allow reports to be produced in multiple formats (HTML, CSV, and XML) and that improves the process for customizing reports (row and column selection)
- User interface enhancements that improve sorting and data filtering
