

NetIQ SecureLogin 8.8 Service Pack 2 Release Notes

June 2022

NetIQ SecureLogin 8.8 Service Pack 2 enhances the product capability and resolves several previous issues.

Many of these improvements were made in direct response to suggestions from our customers. We thank you for your time and valuable input. We hope you continue to help us ensure that our products meet all your needs.

The documentation for this product and the latest Release Notes are available on the NetIQ website in HTML and PDF formats on a page that does not require you to log in. If you have suggestions for documentation improvements, click [comment on this topic](#) at the bottom of any page in the HTML version of the documentation posted at the [NetIQ SecureLogin documentation](#) page. To download this product, see the [NetIQ Downloads](#) website.

What’s New?

- ◆ [“Enhancement” on page 1](#)
- ◆ [“Software Fixes” on page 2](#)

Enhancement

This release includes the following enhancement:

Support to Whitelist WebSSO Defined Applications

An additional Web preference is added to enable WebSSO defined applications as whitelist. When set to Yes, the whitelist rules are applied, that is, other web applications are not taken into consideration for Wizard auto prompting and Single Sign-On (SSO). You can use Add Application to override the preference and still consider applications for Wizard auto prompting and SSO.

By default, the preference is set to No.

Software Fixes

This release includes the following software fixes:

Bug ID	Issue
457053	When client is logged without the network connectivity, NSL switches to offline. When connectivity is switched on, the client still stays offline.
262226	SSoA plug-in for Chrome and Edge Chromium is not working at the first instance.
313012	CPU spike while using Chrome, Edge Chromium, and Firefox browsers with certain applications.
382096	Web based applications fail NTLM authentication in Firefox when SSoA is enabled.
495408	Slbroker crashes while using GPMC.msc and accessing SecureLogin.

Security Vulnerability Fixes

This release provides a fix for [CVE 2022-0778](#), OpenSSL vulnerability issue.

System Requirements

For information about hardware requirements, supported operating systems, and browsers, see [System Requirements for SecureLogin](#) in the [SecureLogin 8.8 Quick Start Guide](#).

Installing or Upgrading

You can either upgrade from the previous versions of SecureLogin or perform a new installation. For information about how to install and how to upgrade, see [SecureLogin Installation Guide](#).

Supported Upgrade Paths

To upgrade to NetIQ SecureLogin 8.8.2, you must be on one of the following versions of NetIQ SecureLogin:

- ◆ 8.8.1
- ◆ 8.8.1 Patch 1
- ◆ 8.8.1 Patch 2

Known Issues

NetIQ Corporation strives to ensure our products provide quality solutions for your enterprise software needs. The following issues are currently researched. For release specific issues, see previous releases' release notes. If you need further assistance with any issue, please contact [Technical Support](#).

responsefile.ini Is Not Getting Generated Under NSLFiles Folder

Workaround: Use existing or previous responsefile.ini file.
