NetIQ Identity Console 1.4. Patch 1 Release Notes

April 2022

This version of Identity Console 1.4 Patch 1 (1.4.0.0100) provides support for the latest OpenSSL version. This document outlines the instructions to apply this patch.

For more information about this release and for the latest release notes, see the Identity Console Documentation Web site. To download this product, see the NetIQ Downloads Web site.

What's New

This release provides support for:

- OpenSSL 1.0.2zd
- NICI 3.2.0.0100

Updating Identity Console

You must be on Identity Console 1.4 at a minimum to apply this update. You can apply this update to Standalone Identity Console and Identity Console As Docker Container.

Standalone Identity Console

To update Standalone Identity Console, perform the following steps:

1. Download the IdentityConsole_140_P1_Linux.tar.gz file from the Software and License Download portal.
2. Untar the IdentityConsole_140_P1_Linux.tar.gz file.
3. Navigate to the IdentityConsole_140_P1_Linux folder and run identityconsole_patch_install.

Identity Console As Docker Container

For more information on how to update Identity Console As Docker Container, see Upgrading Identity Console As Docker Container in *Identity Console Installation Guide*.

Known Issues

NetIQ Corporation strives to ensure our products provide quality solutions for your enterprise software needs. The following issues are currently being researched. If you need further assistance with any issue, please contact Technical Support.
